## Executive Summary

Purpose: The MO HealthNet Pharmacy Program will implement a state specific preferred drug list.

Why Issue Selected: Migraine headache is a chronic, debilitating condition that tends to afflict young, productive, and otherwise healthy people. Patients with frequent or severe migraine headaches who are refractory to acute treatments should receive preventative therapy. Calcitonin gene-related peptide (CGRP) mediates trigeminovascular pain from intracranial vessels to the central nervous system. Stimulation of the trigeminal ganglion induces the release of CGRP, and CGRP infusion can trigger a migraine attack. CGRP inhibitors bind to the CGRP receptor and antagonize CGRP receptor function.

Total program savings for the PDL classes will be regularly reviewed.
