Executive Summary

Purpose: The MO HealthNet Pharmacy Program will implement a state-specific preferred drug list.

Why Issue Selected: Short-acting beta-agonists work quickly to relieve asthma symptoms. They relax the smooth muscles around the airways and are prescribed to use as needed to relieve shortness of breath most commonly associated with asthma. Overuse of these products is common and indicates that asthma is poorly controlled and that long-term control medications should be added or adjusted.

Total program savings for the PDL classes will be regularly reviewed.
