Executive Summary

Purpose: Ensure appropriate and prudent use psychotropic medications

Why Issue Selected: MO HealthNet will assess the usage of psychotropic agents in the pharmacy program with a primary goal of patient safety in regard to polypharmacy or use of more drugs than is medically necessary. Participants may have multiple prescribers and/or multiple pharmacies caring for them, and, by using medical evidence guidelines, this clinical edit can flag potentially dangerous duplication within drug classes, dangerous drug interactions, or overmedication. The edit helps to provide an “early warning alert” to the pharmacist filling the prescription and the prescribing physician. As always, if a provider wishes to override a denial for medically necessary reasons, a claim can be approved with further medical input through direct communication with the MHD Hotline.

Type of Criteria: Increased risk of ADE Preferred Drug List
 Appropriate Indications Clinical Edit

Data Sources: Only Administrative Databases Databases + Prescriber-Supplied

Setting & Population

- Drug class for review: Psychotropic medications
- Age range: All appropriate MO HealthNet participants

Approval Criteria

- Demonstrated compliance to prescribed therapy (90 out of 120 days) for participants ≥ 18 years of age who are not enrolled in foster care **OR**
- Participant ≤ 5 years of age: history of ≤ 3 different psychotropic medications in the past 60 days **OR**
- Participant ≥ 6 years of age: history of ≤ 5 different psychotropic medications in the past 60 days
- Documented diagnosis of a seizure disorder: all seizure medications are not counted in a participant's past history of psychotropic medications

Denial Criteria

- Therapy will be denied if all approval criteria are not met
