

SmartPA Criteria Proposal

Drug/Drug Class:	Anticonvulsants, Rescue Agents PDL Edit	
First Implementation Date:	TBD	
Proposed Date:	September 17, 2020	
Prepared For:	MO HealthNet	
Prepared By:	MO HealthNet/Conduent	
Criteria Status:	□Existing Criteria □Revision of Existing Criteria ⊠New Criteria	

Executive Summary

Purpose: The MO HealthNet Pharmacy Program will implement a state-specific preferred drug list.

Why Issue Selected: There are multiple FDA approved agents for the treatment of acute repetitive seizures or clusters. Diazepam rectal (Diastat®) is indicated for the management of select, refractory participants 2 years of age or older with epilepsy on stable regimens of antiepileptic drugs, who require intermittent use of diazepam to control episodes of increased seizure activity. Diazepam intranasal (Valtoco®) is indicated for the acute treatment of intermittent, stereotypic episodes of frequent seizure activity (i.e., seizure clusters, acute repetitive seizures) that are distinct from usual seizure pattern in epilepsy participants 6 years of age or older. Lastly, midazolam intranasal (Nayzilam®) is indicated for acute treatment of intermittent, stereotypic episodes of frequent seizure activity (i.e., seizure clusters, acute repetitive seizures) that are distinct from usual seizure pattern in epilepsy participants 12 years of age or older. All three agents carry the same contraindication of acute narrow-angle glaucoma. Clinical guidelines from both the American Epilepsy Society and Neurocritical Care Society recommend diazepam rectal and midazolam intranasal when parenteral benzodiazepines are not available. These guidelines were also published prior to the approval of diazepam intranasal therefore, this agent lacks guideline recommendations.

Total program savings for the PDL classes will be regularly reviewed.

Program-Specific Information:

Preferred Agents	Non-Preferred Agents
Diazepam Rectal	Diastat [®]
Valtoco®	 Nayzilam[®]

Type of Criteria: ☐ Increased risk of ADE ☐ Preferred Drug List

Data Sources: ☐ Only Administrative Databases ☐ Databases + Prescriber-Supplied

Setting & Population

- Drug class for review: Anticonvulsants, Rescue Agents
- Age range: All appropriate MO HealthNet participants aged 2 years or older

Approval Criteria

- Documented diagnosis of seizure disorder AND
- For diazepam rectal: participants aged 2 years and older AND
- For Nayzilam: participants aged 12 years and older AND
- Failure to achieve desired therapeutic outcomes with trial on 2 or more preferred agents
 - Documented trial period for preferred agents OR
 - Documented ADE/ADR to preferred agents OR
- For Valtoco:
 - o Participants aged 6 years and older AND
 - o Documented therapeutic trial on generic diazepam rectal

Denial Criteria

Lack of adequate trial on required preferred agents

Therapy will be denied if no approval criteria are met		
Required Documentation		
Laboratory Results: Progress Notes: Other:		
Disposition of Edit		
Denial: Exception Code "0160" (Preferred Drug List) Rule Type: PDL		
Default Approval Period		
1 year
