

SmartPA Criteria Proposal

Drug/Drug Class:	Emsam Clinical Edit
First Implementation Date:	May 16, 2007
Proposed Date:	September 17, 2020
Prepared for:	MO HealthNet
Prepared by:	MO HealthNet/Conduent
Criteria Status:	⊠Existing Criteria □Revision of Existing Criteria □New Criteria

Executive Summary

Purpose: Ensure appropriate utilization and control of Emsam® (selegiline transdermal)

Why Issue Selected:

Emsam® is a transdermally administered version of selegiline, a monoamine oxidase inhibitor (MAOI). Emsam is indicated for the treatment of major depressive disorder. MAOIs are recognized as having broad efficacy in treating depressive disorders; however, despite their effectiveness, MAOI use is generally reserved for patients who do not respond to other treatments, primarily due to safety concerns, tolerability issues, and the requirement that patients follow a modified diet while taking these agents. MAOIs are associated with the risk of hypertensive crisis related to the ingestion and metabolism of tyramine-containing foods. At lower doses (6mg/24hr patch), Emsam is selective for MAO B and avoids first-pass hepatic metabolism; this allows for no dietary restrictions at the lower dose. However, the higher doses of Emsam (9mg/24hr and 12mg/24hr) are non-selective and inhibit both MAO A and MAO B, thus requiring the tyramine modified diet to reduce the risk of hypertensive crisis; these higher doses are typically required for antidepressant activity. Emsam offers a treatment option for patients not achieving satisfactory response with first-line agents, including SSRIs and SNRIs.

Program-Specific Information:

Date Range FFS 7-1-2019 to 6-30-2020							
Drug	Claims	Spend	Cost per patch	Cost per month			
EMSAM 6MG/24HR PATCH	14	\$24,472.72					
EMSAM 9MG/24HR PATCH	16	\$27,695.40	\$58.56 WAC	\$1,756.80 WAC			
EMSAM 12MG/24HR PATCH	0	1					

Type of Criteria:	☐ Increased risk of ADE	☐ Preferred Drug List
	☐ Appropriate Indications	

Data Sources: ☐ Only Administrative Databases ☐ Databases + Prescriber-Supplied

Setting & Population

- Drug class for review: Emsam[®] (selegiline transdermal)
- Age range: All appropriate MO HealthNet participants aged 18 years and older

SmartPA Clinical Proposal Form

Approval Criteria

- Participant is aged 18 years or older AND
- Documented trial of a SSRI, SNRI, bupropion, or mirtazapine OR
- Documented compliance to previous Emsam therapy (defined as 90 days in the past 120 days)

Denial Criteria

- Therapy will be denied if all approval criteria are not met
- Daily dose exceeds 12mg per day
