

SmartPA Criteria Proposal

Drug/Drug Class:	Synagis® Clinical Edit
First Implementation Date:	October 1, 2003
Proposed Date:	June 18, 2020
Prepared for:	MO HealthNet
Prepared by:	MO HealthNet/Conduent
Criteria Status:	<input checked="" type="checkbox"/> Existing Criteria <input type="checkbox"/> Revision of Existing Criteria <input type="checkbox"/> New Criteria

Executive Summary

Purpose: Ensure appropriate utilization and control of Synagis® (palivizumab) injection

Why Issue Selected: Synagis® (palivizumab) injection was FDA approved in June 1998 for the prevention of infection in high-risk pediatric patients due to respiratory syncytial virus (RSV), the most common cause of pneumonia and bronchiolitis in infancy and early childhood. Synagis is the first monoclonal antibody approved to provide passive immunity for an infectious disease. Severe RSV disease is the most common reason infants under 1 year of age are hospitalized in the United States. The American Academy of Pediatrics (AAP) recommends limiting the usage of Synagis to certain preterm infants and infants with certain chronic illnesses. During the 2019-2020 RSV Season (November through April) there were 680 MO HealthNet participants approved for Synagis.

Program-Specific Information:

Date Range FFS 11-01-2019 to 4-30-2020 (RSV Season)			
Drug	Claims	Spend	Cost per Vial
SYNAGIS 50 MG/0.5 ML VIAL	977	\$1,560,228.36	\$1,551.19 MAC
SYNAGIS 100 MG/1 ML VIAL	2,139	\$6,521,211.66	\$2,929.09 MAC

Type of Criteria: Increased risk of ADE Preferred Drug List
 Appropriate Indications Clinical Edit

Setting & Population

- Drug class for review: Synagis® (palivizumab) injection
- Age range: All appropriate MO HealthNet participants ≤ 24 months of age

Approval Criteria

- Claim is during RSV Season (November through April) **AND**
- For prematurity:
 - Participant aged ≤ 12 months and born ≤ 28 weeks gestation **OR**

- Participant aged ≤ 6 months and born between 29 and 32 weeks gestation **OR**
- Participant aged ≤ 3 months and born between 32 and 35 weeks gestation **AND**
 - Enrolled in childcare **OR**
 - Has siblings that are < 5 years of age **OR**
- For chronic lung disease:
 - Participant aged < 12 months and born < 32 weeks gestation with chronic lung disease **AND**
 - required more than 21% oxygen for 28 days following birth **AND**
 - currently requiring medical therapy (oxygen on a continuous basis, bronchodilator, diuretic, corticosteroid or ventilator dependent) **OR**
 - Participant aged < 24 months and born < 32 weeks gestation with chronic lung disease **AND**
 - required more than 21% oxygen for 28 days following birth **AND**
 - required continued medical therapy throughout the past 6 months (oxygen on a continuous basis, bronchodilator, diuretic, corticosteroid or ventilator dependent) **OR**
- For congenital heart disease:
 - Participant aged ≤ 24 months with hemodynamically significant cyanotic and acyanotic congenital heart disease **AND**
 - Receiving medication to control CHF (digoxin, beta blockers, calcium channel blockers, ACE inhibitors, nitroglycerin, anti-coagulants, diuretics, or supplemental oxygen) **OR**
 - Moderate to severe pulmonary hypertension **OR**
 - Cyanotic heart disease **OR**
- For congenital abnormality of the airway or neuromuscular disease that impairs ability to clear secretions: Participant aged < 12 months **OR**
- For severe immunodeficiencies that may benefit from prophylaxis as determined by clinical consultant review: Participant aged ≤ 24 months

Denial Criteria

- Therapy will be denied if no approval criteria are met
- Therapy exceeds 5 doses per RSV season
