

SmartPA Criteria Proposal

Drug/Drug Class:	PrEP Fiscal Edit
First Implementation Date:	April 30, 2020
Proposed Date:	December 17, 2020
Prepared for:	MO HealthNet
Prepared by:	MO HealthNet/Conduent
Criteria Status:	<input type="checkbox"/> Existing Criteria <input checked="" type="checkbox"/> Revision of Existing Criteria <input type="checkbox"/> New Criteria

Executive Summary

Purpose: Ensure appropriate utilization and control of agents used for PrEP

Why Issue Selected: In his State of the Union Address on February 5, 2019, President Donald J. Trump announced a goal to end the HIV epidemic in the United States within 10 years. The new initiative, named Ending the HIV Epidemic: A Plan for America, seeks to reduce the number of new HIV infections in the United States by 75 percent within five years, and then by at least 90 percent within 10 years, for an estimated 250,000 total HIV infections averted. Pre-exposure prophylaxis (PrEP), a once daily oral regimen antiretroviral therapy, has proven to be highly effective in preventing HIV infection for individuals at high risk, reducing the risk of acquiring HIV by up to 97 percent. The US Preventative Services Task Force (USPSTF) published their recommendations on PrEP in June of 2019, stating persons at high risk of HIV acquisition be offered PrEP with effective antiretroviral therapy. Currently, only an approximate 200,000 of an estimated 1.1 million Americans who are at risk for HIV currently receive PrEP. At this time, 2 agents are FDA approved for use as PrEP - Truvada® (emtricitabine and tenofovir disoproxil fumarate) and Descovy® (emtricitabine and tenofovir alafenamide). Generic versions of Truvada are also now available. MO HealthNet desires to provide PrEP to all qualifying participants, and as such, it is fiscally advantageous for MO HealthNet to establish guidelines for PrEP therapy. This edit will apply only to participants being treated for PrEP and will not affect participants being treated for HIV infection.

Type of Criteria: Increased risk of ADE Preferred Drug List
 Appropriate Indications Fiscal Edit

Data Sources: Only Administrative Databases Databases + Prescriber-Supplied

Setting & Population

- Drug class for review: Agents used for PrEP
- Age range: All appropriate MO HealthNet participants
