

SmartPA Criteria Proposal

Drug/Drug Class:	Corticosteroids, Topical PDL Edit
First Implementation Date:	June 21, 2012
Revised Date:	July 7, 2022
Prepared For:	MO HealthNet
Prepared By:	MO HealthNet/Conduent
Criteria Status:	<input checked="" type="checkbox"/> Existing Criteria <input type="checkbox"/> Revision of Existing Criteria <input type="checkbox"/> New Criteria

Executive Summary

Purpose: The MO HealthNet Pharmacy Program will implement a state-specific preferred drug list.

Why Issue Selected: Topical corticosteroids are used for a variety of inflammatory skin conditions, including atopic dermatitis, seborrheic dermatitis, eczema, and plaque psoriasis. Pharmacotherapy choices for these conditions typically include emollients and topical corticosteroids. Emollients play an important role in the treatment of atopic dermatitis; however, topical steroids are the standard of care to which other treatments are compared. The selected potency should depend on the severity and location of disease. These agents control symptoms such as swelling, skin cracking, weeping, crusting, and scaling. This PDL class includes all potency classes and does not require additional criteria to gain access to or move from one group to another.

Total program savings for the PDL classes will be regularly reviewed.
