

# SmartPA Criteria Proposal

<b>Drug/Drug Class:</b>	Corticosteroids, Topical PDL Edit
<b>First Implementation Date:</b>	June 21, 2012
<b>Revised Date:</b>	July 1, 2021
<b>Prepared For:</b>	MO HealthNet
<b>Prepared By:</b>	MO HealthNet/Conduent
<b>Criteria Status:</b>	<input type="checkbox"/> Existing Criteria <input checked="" type="checkbox"/> Revision of Existing Criteria <input type="checkbox"/> New Criteria

## Executive Summary

**Purpose:** The MO HealthNet Pharmacy Program will implement a state-specific preferred drug list.

**Why Issue Selected:** Topical corticosteroids are used for a variety of inflammatory skin conditions, including atopic dermatitis, seborrheic dermatitis, eczema, and plaque psoriasis. Pharmacotherapy choices for these conditions typically include emollients and topical corticosteroids. Emollients play an important role in the treatment of atopic dermatitis; however, topical steroids are the standard of care to which other treatments are compared. The selected potency should depend on the severity and location of disease. These agents control symptoms such as swelling, skin cracking, weeping, crusting, and scaling. This PDL class includes all potency classes and does not require additional criteria to gain access to or move from one group to another.

Total program savings for the PDL classes will be regularly reviewed.
