Proposal

Drug/Drug Class:	Serotonin and Norepinephrine Reuptake Inhibitors (SNRI) Clinical Edit
First Implementation Date:	November 18, 2010
Revised Date:	October 20, 2022
Prepared for:	MO HealthNet

Executive Summary

Purpose: Ensure appropriate utilization and control of serotonin-norepinephrine reuptake inhibitor (SNRI) agents

Why Issue Selected: MO HealthNet will assess the usage of SNRI agents in the pharmacy program with a primary goal of patient safety. Participants may have multiple prescribers and/or multiple pharmacies caring for them, and without a clinical edit it is almost impossible to prevent duplication within a drug class, dangerous drug interactions, or overmedication. By using medical evidence guidelines, this clinical edit can flag potentially dangerous duplicate and high dose therapy for SNRI agents. The edit helps to provide an “early warning alert” to the pharmacist filling the prescription and the prescribing physician. As always, if a provider wishes to override a denial for medically necessary reasons, a claim can be approved with further medical input through direct communication with the MHD Hotline.

Setting & Population

- Drug class for review: Serotonin-norepinephrine reuptake inhibitor (SNRI) agents
- Age range: All appropriate MO HealthNet participants aged 5 years and older

Approval Criteria

- Participant aged 5 years or older **AND**
- Documented compliance to current SNRI therapy regimen (90 days in the past 120 days) **OR**
- Documented appropriate diagnosis required for:
 - Participants < 18 years of age **OR**
 - Participants < 26 years of age who are also enrolled in foster care
- For diagnosis of major depressive disorder: all SNRI agents except Savella
- For diagnosis of fibromyalgia: duloxetine agents or Savella only
- For diagnosis of chronic musculoskeletal pain or diabetic peripheral neuropathic pain: duloxetine agents only
- For diagnosis of generalized anxiety disorder: duloxetine or venlafaxine agents only
- For diagnosis of social anxiety disorder, panic disorder, or migraine: venlafaxine agents only
- For Fetzima: documented therapeutic trial of generic Cymbalta or Effexor XR
- For venlafaxine **HCL** ER tablets and desvenlafaxine ER tablets: documented reason why participant cannot utilize generic Effexor XR capsules

Denial Criteria

- Therapy will be denied if all approval criteria are not met
- Claim exceeds maximum dosage limits (see Appendix A)
- Participants < 18 years of age: history of > 2 SNRI agents for more than 30 days in the past 90 days
- Participants ≥ 18 years of age: history of > 2 SNRI agents for more than 60 days in the past 90 days
- Participant is on more than one SSRI agent and one SNRI agent concurrently for more than 30 days
