Executive Summary

**Purpose:** Ensure appropriate utilization and control of botulinum toxin agents

**Why Issue Selected:** Botulinum toxin has been in use since the 1970s. Over the last few years utilization of botulinum toxin has expanded to a larger range of cosmetic and non-cosmetic approved indications. Three preparations of botulinum toxin type A (Botox®, Dysport®, and Xeomin®) and one preparation of botulinum toxin type B (Myobloc®) are commercially available. Botox first earned FDA approval in 1989. Dysport and Myobloc were approved in 2009, and Xeomin was approved in 2010. The clinical effect of botulinum toxin is the result of a reversible inhibition of acetylcholine release which prevents contraction of muscle. The molecules and pharmacokinetics of the botulinum toxin products differ, making a straight conversion ratio of equivalent therapeutic doses difficult. MO HealthNet will edit botulinum toxin agents to ensure appropriate prescribing of these agents for non-cosmetic uses only.

**Type of Criteria:** ☒ Existing Criteria  ☐ Revision of Existing Criteria  ☐ New Criteria

**Data Sources:** ☒ Databases + Prescriber-Supplied  ☐ Only Administrative Databases  ☐ Clinical Edit  ☐ Preferred Drug List  ☐ Appropriate Indications  ☐ Increased risk of ADE
Setting & Population

- Drug class for review: Botulinum toxin agents
- Age range: All appropriate MO HealthNet participants

Approval Criteria

- Diagnosis of blepharospasm:
  - For use of Botox:
    - Participant age ≥ 12 years AND
    - Documented diagnosis of cervical dystonia torticollis
  - For use of Xeomin:
    - Participant age ≥ 18 years AND
    - Documented trial and failure of Botox in the past year
- Diagnosis of upper limb spasticity:
  - For use of Botox or Dysport: Participant age ≥ 2 years
  - For use of Xeomin:
    - Participant age ≥ 18 years AND
    - Documented trial and failure of Botox or Dysport in the past year
- Diagnosis of lower limb spasticity:
  - Participant age ≥ 2 years AND
  - Botox or Dysport
- Diagnosis of chronic sialorrhea:
  - Participant age ≥ 18 years AND
  - Xeomin or Myobloc
- Diagnosis of strabismus:
  - Participant age ≥ 12 years AND
  - Botox only
- Diagnosis of cervical dystonia torticollis:
  - Participant age ≥ 18 years AND
  - For use of Xeomin or Myobloc: trial and failure of Botox or Dysport in the past year
- Diagnosis of chronic migraine:
  - Participant age ≥ 18 years AND
  - Botox only
  - If no previous history of Botox therapy in the past year:
    - Trial and failure of CGRP inhibitors (90 days out of the past 150 days) AND
    - Documented history of ≥ 4 migraines per month
- Diagnosis of hyperhidrosis, primary focal hyperhidrosis, secondary facial hyperhidrosis, neurogenic bladder, detrusor over-activity, hypertonicity of bladder, urge incontinence, or mixed incontinence:
  - Botox only AND
  - Documented trial and failure of anticholinergics, antispasmodics, or drying agents AND
  - Subject to Clinical Consultant Review

Denial Criteria

- Therapy will be denied if no approval criteria are met
- Inappropriate diagnosis or cosmetic use
