Executive Summary

**Purpose:** The MO HealthNet Pharmacy Program will implement a state-specific preferred drug list.

**Why Issue Selected:** Pulmonary arterial hypertension (PAH) is a severe, progressive, and often fatal condition that occurs idiopathically as well as in association with pulmonary, cardiac, and other thoracic conditions. Reliable estimates of the total prevalence of this condition are difficult to obtain because of the diversity of identifiable causes. PAH, formerly known as primary pulmonary hypertension, is characterized by elevations in pulmonary arterial pressure (PAP) to greater than 25 mmHg at rest and greater than 30 mmHg with exercise. The disease occurs when the PAP is abnormally elevated and forces the right side of the heart to progressively work harder when it pumps blood to the lungs. Symptoms include dyspnea, fatigue, chest pain, palpitations, syncope, and edema. Prognosis varies based on the severity of disease, whether right heart failure is present, and response to vasodilator therapy. If left untreated, the disease produces increases in PAP that may lead to right ventricular failure and death. Despite recent developments in the symptomatic treatment of PAH, there is still no cure.

PAH should be differentiated from pulmonary hypertension secondary to diseases of the heart and lung based on both pathology of the underlying disease and accepted treatments.

Total program savings for the PDL classes will be regularly reviewed.

Type of Criteria:  ☐ Increased risk of ADE  ☒ Preferred Drug List
☒ Appropriate Indications  ☐ Clinical Edit

Data Sources:  ☐ Only Administrative Databases  ☒ Databases + Prescriber-Supplied

Setting & Population

- Drug class for review: Pulmonary Arterial Hypertension (PAH) Agents, Phosphodiesterase-5 (PDE5) and Soluble Guanylate Cyclase (SGC) Stimulators
- Age range: All appropriate MO HealthNet participants

Approval Criteria

- Documented diagnosis of pulmonary hypertension AND
- Documented compliance on current therapy regimen OR
- For injectable Revatio: failure to achieve desired therapeutic outcomes with trial of 2 or more preferred agents, with one being generic sildenafil injection AND
- Failure to achieve desired therapeutic outcomes with trial on 2 or more preferred agents
  o Documented trial period for preferred agents OR
  o Documented ADE/ADR to preferred agents
- For Adempas:
  o Documented diagnosis of chronic thromboembolic pulmonary hypertension OR
  o Trial of 1 preferred agent OR
  o Documented ADE/ADR to preferred agents
- Claim exceeds minimum dosing limitations for the following:

<table>
<thead>
<tr>
<th>Drug Description</th>
<th>Generic Equivalent</th>
<th>Minimum Dosing Limitation</th>
</tr>
</thead>
<tbody>
<tr>
<td>REVATIO 10 MG/12.5 ML VIAL</td>
<td>SILDENAFIL</td>
<td>3 vials per day</td>
</tr>
<tr>
<td>REVATIO 10 MG/ML ORAL SUSP</td>
<td>SILDENAFIL</td>
<td>6 mL per day</td>
</tr>
<tr>
<td>REVATIO 20 MG TABLET</td>
<td>SILDENAFIL</td>
<td>3 tablets per day</td>
</tr>
</tbody>
</table>

Denial Criteria

- History of nitrate therapy within the last 45 days
- For Adempas: participant is currently pregnant
- For Revatio: history of ritonavir (Norvir or Kaletra) therapy within the last 45 days
- Lack of adequate trial on required preferred agents
- Therapy will be denied if all approval criteria are not met

Required Documentation

Laboratory Results:  
MedWatch Form:  
Progress Notes:  
Other:

Disposition of Edit

Denial: Exception Code “0160” (Preferred Drug List)
Rule Type: PDL

Default Approval Period

1 year
