Executive Summary

Purpose: The MO HealthNet Pharmacy Program will implement a state-specific preferred drug list.

Why Issue Selected: Chronic obstructive pulmonary disease (COPD) is a lung disease that encompasses chronic bronchitis and emphysema. COPD is a major cause of death and illness throughout the world and is third leading cause of death in the United States. Cigarette smoking is the most common cause of COPD, however breathing in lung irritants, like pollution, dust or chemicals over a long period of time may also cause or contribute to the disease. There is no cure for COPD, but treatment can alleviate symptoms, decrease the frequency and severity of exacerbations and increase exercise tolerance. The 2020 Global Initiative for Chronic Obstructive Lung Disease (GOLD) guidelines provide evaluation and treatment of patients with moderate to severe COPD (FEV1 < 80% of predicated normal and FEV1/FVC < 70%). Treatment includes short-acting muscarinic antagonists, long-acting beta-agonists, long-acting muscarinic agents, and inhaled corticosteroids which are the mainstays of therapy for COPD.

Total program savings for the PDL classes will be regularly reviewed.
